## Introduction to Bird Spikes

Bird spikes are the world's most widely used bird deterrent — and for good reason. They are simple, durable, humane, and highly effective. In Dubai, where pigeons and other pest birds are a constant challenge for property owners, bird spikes provide a reliable first line of defense that holds up beautifully in the UAE's extreme climate.

### Types of Bird Spikes Available in Dubai

| Spike Type      | Material        | Best Use                    | Lifespan    |
|-----------------|-----------------|-----------------------------|-------------|
| Standard Spikes | Stainless Steel | Commercial ledges, rooftops | 10–15 years |

|                   |                 |                           |             |
|-------------------|-----------------|---------------------------|-------------|
| Narrow Spikes     | Stainless Steel | Narrow ledges, pipes      | 10–15 years |
| Wide-Base Spikes  | Stainless Steel | Beams, wide parapets      | 10–15 years |
| Polycarbonate     | Plastic         | Villas, hotels (discreet) | 5–8 years   |
| Extra-Wide Spikes | Stainless Steel | Warehouse rafters         | 10–15 years |

### Where Are Bird Spikes Installed?

- Roof parapets and ledges on residential villas
- AC unit tops and condenser frames
- Warehouse and factory roof beams
- Commercial signage and hoarding frames
- Solar panel edges and mounting frames
- Window sills, balcony rails and pergolas
- CCTV and antenna mounting brackets
- Boundary walls and gate tops

### Why Professional Installation Matters

Even the best bird spikes fail if installed incorrectly. Common DIY mistakes include wrong spike width for the surface, gaps in coverage that birds exploit, inadequate adhesive that fails in heat, and missing secondary surfaces where birds re-roost.

- Professional site survey identifies ALL roosting surfaces
- Correct spike model selected for each surface type
- Commercial-grade adhesive rated for UAE temperatures
- Full perimeter coverage with no exploitable gaps
- Written workmanship guarantee on completion

### Bird Spike Installation Cost in Dubai

Cost varies by property size, spike type, and access difficulty. Stainless steel spikes typically cost more upfront but last 2–3x longer than polycarbonate. Most residential jobs are completed in a single day. Commercial projects may take 2–3 days.

## Frequently Asked Questions

### **Q: Do bird spikes hurt birds?**

A: No. Spikes prevent landing — they do not trap or injure birds.

### **Q: How long do they last?**

A: Stainless steel spikes last 10–15 years. Polycarbonate 5–8 years.

### **Q: Can I install them myself?**

A: DIY is possible but professional installation ensures full effectiveness.

### **Q: Do they work for all birds?**

A: Yes — pigeons, mynahs, sparrows, and seagulls.

### **Q: Will they damage my building?**

A: No — professional installation uses reversible adhesive fixings.
